			ART UNIT	PAPER NUMBER
			1711	

DATE MAILED: 02/25/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Art Unit 1711

It is assumed that no Information Disclosure Statement has been submitted since none has been received by the Office.

Claims 1-9 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicants regard as the invention.

The term "low" is subjective and therefore unclear.

The term "high fidelity replication" is not art recognized and therefore unclear and furthermore the term "high" is subjective and therefore unclear.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Muskat (USP 3,557,046).

Muskat discloses a composition which is produced from a "gel" and which contains an acrylate reactive plasticizer and which is converted to a "clear" sheet. Since both of applicants'

Art Unit 1711

and patentee's materials are produced from a dead polymer (PVC in the case of the reference) and a reactive plasticizer and are in the form of a maleable composition prior to curing, applicants' and patentee's characteristics would reasonably appear to be the same.

When the reference discloses all the limitations of a claim except a property or function, and the Examiner cannot determine whether or not the reference inherently possesses properties which anticipate or render obvious the claimed invention, basis exists for shifting the burden of proof to applicant. Note In re Fitzgerald et al. 619 F. 2d 67, 70, 205 USPQ 594, 596, (CCPA 1980). See MPEP § 2112-2112.02.

The non-statutory double patenting rejection, whether of the obviousness-type or non-obviousness-type, is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent. *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); and *In re Goodman*, 29 USPQ 2d 2010 (Fed. Cir. 1993).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(b) and (c) may be used to overcome an actual or provisional rejection based on a non-statutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.78(d).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit 1711

Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-38 of U.S. Patent No. 6,570,714. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims do not preclude formation of an article. In any case formation of an article from a composition requires the composition and therefore it would have been obvious to a practitioner having ordinary skill in the art at the time of the invention to form the composition recited by the patented claims first in order that the article of the patent be produced absent any showing of surprising or unexpected results.

Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-25 of U.S. Patent No. 6,416,690. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims do not preclude the formation of a lens but in any case production of a composition would have been obvious to a practitioner having ordinary skill in the art at the time of the invention based on the patented claims in that in order to produce the article of the patented claims it is necessary to produce the composition

Art Unit 1711

recited by the patented claims and motivated to possess the article of the patented claims absent any showing of surprising or unexpected results.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey Mullis whose telephone number is (571) 272-1075. The examiner can normally be reached on Monday-Friday from 9:30 to 6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck, can be reached on (571) 272-1078. The fax phone number for this Group is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (571) 272-0994.
